-
...ELC system software publishers can wrap, brand and prepare their
products for online distribution -- in a way that ensures quick, seamless,
real-time transactions; reliable payment; controlled trial use; user
registration; license agreement acknowledgment; and protection from piracy.

                        Full text release follows:

        Portland Software and CyberSource Join Forces to Deliver Bags...

...Certificate (ELC) and clearing house technology to build the most
advanced Internet software distribution system available."
        "Portland Software is at the forefront of helping the Internet
evolve into an exciting and powerful distribution vehicle," said Charles
Jennings, president and CEO of Portland Software. "Our partnership with
CyberSource offers customers a reliable and proven system for online
transactions."
        Portland Software and CyberSource have been working closely with
Microsoft as part of Microsoft's electronic distribution pilot
program that enables customers to download and purchase Microsoft products
directly at their desktops. Portland Software's ZipLock technology was
selected by Microsoft to provide content security, branding, and
payment processing.
        "Portland Software and CyberSource have both been important to us in
the electronic distribution of software," said Martin Tobias,

manager of electronic software distribution for Microsoft. "We consider it very good news that Portland Software and CyberSource are working together to provide a secure and comprehensive mechanism for electronic commerce."

A Secure Packaging and Transaction System for Internet Commerce In a joint development effort, CyberSource and Portland Software integrated their technologies to create a cyber packaging and Electronic License Certificate (ELC(TM)) transaction...

...infrastructure -- which provides security and accountability for both publisher and customer.

To purchase software using the ELC model, a customer may go to any merchant server or online storefront which houses ZipLock encrypted software products. To make a purchase, the customer simply double-clicks the ZipLock executable, which prompts the user for payment information---

and collects the user's credit card data. This data is then routed to a transaction clearinghouse, which in connection with associated payment processors, authenticates and verifies the credit card order. Once the order is approved, the clearinghouse delivers an ELC to the end user in the form..

...ELC system, software publishers can wrap, brand and prepare their products for online distribution -- in a way that ensures quick, seamless, real-time transactions; reliable payment; controlled trial use; user registration; license agreement acknowledgment; and protection from piracy.

"ESD opens a new world of marketing and distribution opportunities for the software...

...Jeff Swan, vice president of business development and product procurement for Surplus Direct. "ESD provides Surplus Direct opportunity to offer the retail buying experience of "pay for it and take it home" to our online customers."

Borland International, Programmer's Paradise, and Surplus Direct recently joined CyberSource's extensive list of...000 products through two primary marketing vehicles: (1) a weekly catalog distribution and (2) an online store ranked 60th in the top 100 most active Internet sites. Surplus Direct prides itself in its ability to offer high quality products and service at exceptionally low prices through its direct mail and Internet distribution vehicles. Founded in 1991, Surplus Direct is headquartered in Hood River, Oregon.

About Portland Software
Portland Software develops and markets tools for global electronic commerce and is the recognized leader in delivery of electronic contents over public and private networks. Its ZipLock product line supports highly secure distribution of digital content and customer payment delivered via the Internet, as well as via CD-ROM and other media. An active participant in the Microsoft Electronic Software Distribution pilot program, Portland Software is a preferred provider of secure container technology for online distribution of Microsoft products. Founded in 1994, Portland Software is headquartered in Portland, Oregon. For more information, please visit Portland Software's Web site at http...

president and CEO of Portland Software. "Our partnership with CyberSource
offers customers a reliable and proven system for online transactions."

      Portland Software and CyberSource have been working closely with
Microsoft as part of Microsoft's electronic distribution pilot
program that
enables customers to download and purchase Microsoft products directly at
their desktops. Portland Software's ZipLock technology was selected by
Microsoft to provide content security, branding, and payment
processing.

      "Portland Software and CyberSource have both been important to us in
the
electronic distribution of software," said Martin Tobias, manager of
electronic software distribution for Microsoft. "We consider it
very good
news that Portland Software and CyberSource are working together to provide
a
secure and comprehensive mechanism for electronic commerce."

      A Secure Packaging and Transaction System for Internet Commerce
      In a joint development effort, CyberSource and Portland Software
integrated their technologies to create a cyber packaging and Electronic
License Certificate (ELC(TM)) transaction...

...infrastructure --
which provides security and accountability for both publisher and customer.

      To purchase software using the ELC model, a customer may go to any
merchant server or online storefront which houses ZipLock
encrypted software
products. To make a purchase, the customer simply double-clicks the
ZipLock
executable, which prompts the user for payment information---
                                    and collects the
user's credit card data. This data is then routed to a
transaction
clearinghouse, which in connection with associated payment
processors,

authenticates and verifies the credit card order. Once the order is approved,
the clearinghouse delivers an ELC to the end user in the form..

...ELC system software publishers can wrap, brand and
prepare their products for online distribution -- in a way that ensures
quick,
seamless, real-time transactions; reliable payment; controlled trial
use; user
registration; license agreement acknowledgment; and protection from piracy.

"ESD opens a new world of marketing and distribution opportunities for
the
software...

...Jeff Swan, vice
president of business development and product procurement for Surplus
Direct.
"ESD provides Surplus Direct opportunity to offer the retail buying
experience
of "pay for it and take it home" to our online customers."

Borland International, Programmer's Paradise, and Surplus Direct
recently
joined CyberSource's extensive list of...000 products through two primary
marketing vehicles: (1) a weekly catalog distribution and (2) an online
store
ranked 60th in the top 100 most active Internet sites. Surplus
Direct prides
itself in its ability to offer high quality products and service at
exceptionally low prices through its direct mail and Internet
distribution
vehicles. Founded in 1991, Surplus Direct is headquartered in Hood River,
Oregon.

About Portland Software

Portland Software develops and markets tools for global electronic
commerce and is the recognized leader in delivery of electronic
contents over
public and private networks. Its ZipLock product line supports highly
secure
distribution of digital content and customer
payment delivered via the
Internet, as well as via CD-ROM and other media. An active
participant in the
Microsoft Electronic Software Distribution pilot program, Portland
Software is
a preferred provider of secure container technology for online
distribution of
Microsoft products. Founded in 1994, Portland Software is headquartered in
Portland, Oregon. For more information, please visit Portland Software's
Web
site at http...

    Supplier Number: (USE FORMAT 7 FOR FULLTEXT)

Text:
   ...stands vigilant in its battle against services and technologies
that would liberate music, movies, games, media, etc., to all takers. On
the legislative front, a bill in Congress (HR 5211) would give
content producers the ability to interfere with peer-to-peer (P2P) networks
if used for down-loading theirworks. Specifically the bill would
"enable content owners' self-help measures to combat peer-to-peer piracy."
(2) In the article discussing the bill, "the Association for
Computing Machinery (ACM) ...1) Permitting self-help on P2P networks could
mean 'all computers connected to the Internet.' (2) Self-help efforts
'would create new volumes of network traffic, resulting in Internet
service disruptions and degradation of service for innocent Internet
users, many of whom may not be using P2P networks.' (3) The bill
'underestimates the technical challenge' of identifying copyrighted works
online. (4) Self-help would ...involve defeating firewalls and other
security measures, that ACM said violated both the Digital Millennium
Copyright Act (DMCA) and the USA Patriot Act. (5) The bill ignores
the fact that P2P is used for a variety of uses, including R&D via
distributed computing."   ...3).
        The letters to corporate America4 asked the companies to prevent
their employees from taking copyrighted material off the Web while at work.
The creative content organizations pointed out that it "appears that
many corporate network users are taking advantage of fast
Internet connections at work by publicly uploading and downloading
infringing files on P2P services and also distributing and storing
such files on corporate intranets. ... The use of your digital
network to pirate music, movies and other copyrighted works both
interferes with the business purposes your network was built to
serve and subjects your employees and your company to significant legal
liability under the federal copyright law." Now that's subtle. The creative
content organizations' letter encourages companies to implement
"employee policies and technical measures to prevent copyright
infringements on ... corporate networks."
        The RIAA has already "obtained a $1...to provide them with accurate
information.
        ACRL leaders agree that peer-to-peer networking file sharing is a
campus problem that, along with facilitating the distribution of
unauthorized copies of copyrighted work, uses valuable bandwidth and
affects overall campus network operations. We disagree, however,
with the implication that all file-sharing activities are infringements of
copyright that constitute piracy. ... Moreover, universities and libraries
are using peer-to-peer networks for research, teaching, and document
transfer that are all within the bounds of ...According to a report
in the November 26, 2002, Washington Internet Daily on the Naval Academy,
"Midshipmen are given PGs when joining the Academy and pay them off

over a 4-year stint through deductions from their monthly paychecks."
Articles discuss the actions that network managers at Stanford, Yale, Penn
State...seen as a proactive unit of the organization, and, in such a
leadership position, should still protect user rights. It should assure
that the Library Bill of Rights and other professional, free speech,
and Internet priorities are taken into account in the development of a
policy."
        Alternative Approaches for Entertainment Organizations...readers:
How many of you still get your email via peer-to-peer IJIJCP dialups or
the old "free" Internet, and how many of you pay $19.95 a month or
more to an ISP? How many of you watch "free" television over the airwaves,
and how many of you pay $20-$60 a month for cable or satellite
television? (Not to mention continue to rent movies on videotape and DVD,
and purchasing physical copies of...will be hundreds of millions of paying
subscribers. That is, unless they wait too long, in which case, Kazaa
itself will start to offer (and charge for) these advantages. (Or
would, in the absence of legal challenges.) Much as AOL, MSN, Yahoo!, Cnet,
and many others have collectively built a multi-billion dollar media
business on the "free" Web, "publishers" will evolve on file sharing
networks.
        Why would you pay for a song that you could get for free? For
the same reason that you will buy a book that   ...been supplemented by
various aggregated premium channels. HBO, one of those channels, is now
television's most profitable network. Meanwhile, over on the Internet,
people pay their ISP $19.95/month for the equivalent of "basic
cable," and an ideal opportunity for a premium channel, a music download
service, has gone begging for lack of vision on the part of existing music
publishers.
        Another lesson from television is that people prefer subscriptions
to pay-per-view, except for very special events. What's more, they
prefer subscriptions to larger collections of content, rather than single
channels. So, people subscribe...

...Mediation Platform Provides Greater Flexibility for Improved ROI; FusionWorks
Version 3.0 Gives Communication Service Providers More Control Over the
Transformation of Network Data Into Billable Data.
-
...to look at the mediation layer of their solution stack to ensure that
revenue leakage is kept to a minimum, and that customers are accurately
billed based on actual usage, content and application used,"
said Barry Murphy, CEO of Openet Telecom.
        Built from the ground up, FusionWorks is an open standards-based,
distributed software platform that is hardware and software
independent. A fully-scalable convergent mediation platform, it unifies

customer usage patterns from legacy network infrastructures, IP
networks and all generations of mobile networks, including WAP, GPRS, CDMA,
TDMA, EDGE and UMTS. FusionWorks enables service providers to manage the
growing complexity of their business infrastructure -- including the
collection of subscriber usage information, the integration of new and
legacy billing systems, event-based transaction pricing and
management, customer care, data warehousing, fraud management and other
related applications.   The added capabilities of FusionWorks Version 3.0
allow service providers to:

   -- Manage multiple versions of the business rules that define how data i
s

      collected, transformed and distributed to business applications such
           as billing
 in order to optimize their effectiveness and efficiency
           -- Decrease operational expense and find revenue opportunities
           -- Plug revenue and fraud leaks
           -- Add equipment to the network or feed new applications without
              disrupting the ongoing mediation process
           -- Support advanced IP and 2.5 and 3G mobile communication
 technologies
              as well as all the common technologies

   -- Obtain additional reports to more effectively monitor and control the
           mediation process
           -- Control all the security capabilities...

...with minimal effort
        "As networks and services become more complex, the need for a
flexible, convergent mediation systems takes on new importance," said Denis
Cronin, billing development manager, Esat Business, the leading
provider of broadband data and corporate Internet solutions in Ireland.
"FusionWorks gives us the power to control the software...

...the Dublin-based company established a presence in the United States
with the signing of AT&T Wireless, and garnered Best New Company honors
at Billing World 2001 and Best Young Company 2001 honors by the
Irish Software Association.   The company also recently closed on a $20
million investment from Benchmark...

...process," said Murphy.   "FusionWorks enables service providers to gain a
better understanding of customer usage, shorten the time it takes to launch
a new service, bill for services more accurately, retrieve the
information necessary to improve service penetration and generate more
revenue from existing services."
        About Openet Telecom
        Established in 1999, Openet Telecom is the world leader in providing
scalable mediation solutions that enable communication providers to easily
implement, manage and bill sophisticated services.   Openet Telecom's
flagship product, FusionWorks, is a high-performance mediation platform
that unifies customer usage patterns from legacy network infrastructure, IP
Networks...

Document Type: Magazine/Journal ; Tabloid ; General Trade
Word Count: 546
-
...the 10M-bps bandwidth of a single standard Ethernet connection is more
than enough to handle the traffic from the relatively slower links to the
Internet.
      Ramp it up
      In the intranet case, however, an Ethernet connection may well not be
nearly fast enough. Our tests (as well as those of others) have shown that
for static content, even multiple Ethernets are not fast enough
under heavy user loads. To keep a reasonably capable intranet server busy,
you need a 100M-bps connection.
      The reason is simple: Just as today's powerful file servers can
deliver more data than four Ethernets can carry, Web servers can
easily deliver more static pages than an Ethernet can handle.
      As we discussed a few weeks ago, however, the growing movement toward
having HTTP servers provide more dynamic content may well ultimately
lower the amount of data a server must deliver to users.
      As server content becomes more dynamic, the server's
network mileage will unavoidably vary. During this transition, you
must monitor loads carefully.
      The safest bet for any HTTP server is to make sure it contains...

...slower connection will probably be more than adequate for external
customers, and it might even be enough for an initial intranet setup.
Should your intranet traffic grow, the faster connection will
be available with minimal disruption.
      With this approach, you can spend little money and yet be prepared to
handle both Internet and intranet users.

...ownership."

Array Networks' all-in-one Array product family combines accelerated Layer 4-7 server load balancing with high-performance caching, built-in SSL acceleration, content rewrite for transparent interaction with content delivery networks, Web security, global server load balancing, and seamless clustering. The Array platforms service-on-demand configurations and open API offer the flexibility to add a rich set of services and features, including essential Web traffic management capabilities as well as dynamic caching, content replication, advanced security, billing and monitoring systems, etc.

"Array Networks' integrated platform is an ideal solution for the channel because its all-in-one capabilities reduce the complexity and risk of Web traffic management," said Donald Massaro, President and Chief Executive Officer of Array Networks. "The Array appliance delivers our 'Power tools for the Web,' an integrated suite of Web traffic management capabilities that's like selling Microsoft Office for the network. Pay-as-you-grow configurations enable solution providers to address their customers' immediate needs and expand their business without disruption."

Array Networks' Power Partners channel program offers benefits including:
-- Pre-sales and technical support through Array sales offices in Germany, Great Britain, France, Japan, Korea...

...services operators should submit accurate and complete service cost data
and other related information.
     Section 4 -- Telecommunications Resources Article 27 The state shall
implement a pay-for-use system for telecommunications resources with
unified planning, centralized management, and rational distribution.
     The term telecommunications resources in the previous paragraph refers
to radio...

...positions, telecommunications network numbers, and other such resources
which are used to achieve telecommunications functions and which are
limited.

Article 28 Telecommunications service operators should pay telecommunications resource fees for the possession and use of telecommunications resources.

Specific fee collection methods can be formulated by the competent information industry authorities of...

...in which it is not possible to restore or reroute services within the prescribed period, the users should be notified promptly, and should not be charged the monthly leasing fees for the period of the disruption. However, telecommunications service disruptions caused by telecommunications terminal equipment represent an exception.

Article 34 Telecommunications service operators should make it convenient for telecommunications users to pay their bills and make inquiries. In cases in which telecommunications users request an itemized statement of charges for domestic long-distance communication services, international communication services, mobile communication services, and information services, etc., the telecommunications service operators should provide them free of charge.

When telecommunications users experience exceptionally large telecommunications expenses, the telecommunications service operators should notify the telecommunications service users as soon as this is discovered, as well as adopting the appropriate measures.

The expression exceptionally large telecommunications expenses in the previous paragraph refers to the sudden appearance of charges which are more than five times the average monthly telecommunications charges for the telecommunications user for the previous three months.

Article 35 ...service operators promptly and in full, in keeping with the agreed-upon period of time and method; in cases in which telecommunications users do not pay telecommunications charges within the prescribed time, the telecommunications service operators have the right to demand the overdue telecommunications payments, and they can also collect an additional three in breach-of-contract fees per day in keeping with the amount of the delinquent payment.

In the case of users who have still not remitted their telecommunications payment for a period of 30 days over the agreed-upon time, the telecommunications service operators can temporarily halt the provision of telecommunications services to them..

...contract fees in keeping with the law.

Operators of mobile telecommunications services can reach agreements with telecommunications users regarding the time limits and modes for payment of telecommunications charges, and they are not constrained by the time limits prescribed in the previous paragraph.

Telecommunications service operators should restore telecommunications services which have been temporarily halted to users within 48 hours of the payment of the overdue telecommunications fees and breach-of-contract fees by the telecommunications users.

Article 36 In cases in which engineering construction, network construction, or...

...services should provide public-service telephone services such as fire alarm, burglar alarm, emergency medical treatment, and traffic accident warnings, etc., to users free of charge, as well as ensuring that the communications lines are unimpeded.

Article 38 Telecommunications service operators should provide fair and reasonable access services in a timely...

...attain the telecommunications service standards stipulated by the state or their publicly announced corporate standards, or the telecommunications users have objections to paying the telecommunications charges, telecommunications users have the right to request the telecommunications service operators to resolve the issue; in cases in which the

telecommunications service operators refuse to...

...providing an answer to the complainant within 30 days of receiving the
complaint.
    In cases in which telecommunications users have objections to paying
local telephone charges, in response to a request from the
telecommunications user(s), the telecommunications service operators should
provide them with the basis for the collection of local telephone fees free
of charge, and they also have the obligation to take the necessary
steps to assist the telecommunications users in locating the cause.
    Article 41 In the course...telecommunications networks,
telecommunications service operators should see to it that their plans,
construction, and operation are synchronized with the demands of state
security and telecommunications network security.
    Article 62 In the course of public information services, when
telecommunications service operators discover information being
transmitted in the telecommunications network that clearly
falls into the category of content listed in Article 57 of these
regulations, they should immediately halt the transmission, keep relevant
records, and report it to the concerned state offices.
    Article 63 Use of the content of information transmitted
on telecommunications networks and the consequences thereof are the
responsibility of telecommunications users.
    In cases in which the information transmitted on
telecommunications networks and used by telecommunications users falls into
the category of state secret information, measures to protect the secrets
must be taken in...one, Article 34 and paragraph two, Article 40 of these
regulations, in which telecommunications service operators refuse to
provide users with an itemized statement of charges for domestic
long-distance communication services, international communication services,
mobile communication services, and information services, etc., free of
charge, or refuse to provide telecommunications users with the basis
for the collection of local telephone fees free of charge when the
telecommunications users have objections to and make requests concerning
the remittance of local telephone charges, the telecommunications
management offices of the provinces, autonomous regions, and municipalities
directly under the central government will order corrections to be made and
apologies given...

Text:

...stands vigilant in its battle against services and technologies that would liberate music, movies, games, media, etc., to all takers. On the legislative front, a bill in Congress (HR 5211) would give content producers the ability to interfere with peer-to-peer (P2P) networks if used for down-loading their works. Specifically the bill would "enable content owners' self-help measures to combat peer-to-peer piracy." (2) In the article discussing the bill, "the Association for Computing Machinery (ACM) wrote that this measure would encourage unethical behavior.... 'We are concerned that HR 5211 would legitimize a variety of ...

...1) Permitting self-help on P2P networks could mean 'all computers connected to the Internet.' (2) Self-help efforts 'would create new volumes of network traffic, resulting in Internet service disruptions and degradation of service for innocent Internet users, many of whom may not be using P2P networks.' (3) The bill 'underestimates the technical challenge' of identifying copyrighted works online. (4) Self-help would involve defeating firewalls and other security measures, that ACM said violated both the Digital Millennium Copyright Act (DMCA) and the USA Patriot Act. (5) The bill ignores the fact that P2P is used for a variety of uses, including R&D via distributed computing."
        ...3).
        The letters to corporate America4 asked the companies to prevent their employees from taking copyrighted material off the Web while at work. The creative content organizations pointed out that it "appears that many corporate network users are taking advantage of fast Internet connections at work by publicly uploading and downloading infringing files on P2P services and also distributing and storing

such files on corporate intranets. ... The use of your digital
network to pirate music, movies and other copyrighted works both
interferes with the business purposes your network was built to
serve and subjects your employees and your company to significant legal
liability under the federal copyright law." Now that's subtle. The creative
content organizations' letter encourages companies to implement
"employee policies and technical measures to prevent copyright
infringements on ... corporate networks."
        The RIAA has already "obtained a $1...to provide them with accurate
information."
        ACRL leaders agree that peer-to-peer networking file sharing is a
campus problem that, along with facilitating the distribution of
unauthorized copies of copyrighted work, uses valuable bandwidth and
affects overall campus network operations. We disagree, however,
with the implication that all file-sharing activities are infringements of
copyright that constitute piracy. ... Moreover, universities and libraries
are using peer-to-peer networks for research, teaching, and document
transfer that are all within the bounds of ...According to a report
in the November 26, 2002, Washington Internet Daily on the Naval Academy,
"Midshipmen are given PCs when joining the Academy and pay them off
over a 4-year stint through deductions from their monthly paychecks."
Articles discuss the actions that network managers at Stanford, Yale, Penn
State...

...seen as a proactive unit of the organization, and, in such a leadership
position, should still protect user rights. It should assure that the
Library Bill of Rights and other professional, free speech, and
Internet priorities are taken into account in the development of a policy."
        Alternative Approaches for Entertainment Organizations...readers: How
many of you still get your email via peer-to-peer IJIJCP dialups or the old
"free" Internet, and how many of you pay $19.95 a month or more to
an ISP? How many of you watch "free" television over the airwaves, and how
many of you pay $20-$60 a month for cable or satellite television?
(Not to mention continue to rent movies on videotape and DVD, and
purchasing physical copies of...

...will be hundreds of millions of paying subscribers. That is, unless they
wait too long, in which case, Kazaa itself will start to offer (and
charge for) these advantages. (Or would, in the absence of legal
challenges.) Much as AOL, MSN, Yahoo!, Cnet, and many others have
collectively built a multi-billion dollar media business on the
"free" Web, "publishers" will evolve on file sharing networks.
        Why would you pay for a song that you could get for free? For
the same reason that you will buy a book that you could borrow from the...

...been supplemented by various aggregated premium channels. HBO, one of
those channels, is now television's most profitable network. Meanwhile,
over on the Internet, people pay their ISP $19.95/month for the
equivalent of "basic cable," and an ideal opportunity for a premium
channel, a music download service, has gone begging for lack of vision on
the part of existing music publishers.
        Another lesson from television is that people prefer subscriptions to
pay-per-view, except for very special events. What's more, they
prefer subscriptions to larger collections of content, rather than single
channels. So, people subscribe...

The challenge of HTTP server configuration. (Looking Forward)(PC Week Netweek)
(Technology Tutorial)(Tutorial)(Column)

Van Name, Mark L.; Catchings, Bill
PC Week , v13 , n34 , pN8(1)
August 26 , 1996
Document Type: Tutorial Column
ISSN: 0740-1604
Language: English   Record Type: Fulltext; Abstract
Word Count: 575   Line Count: 00046

Abstract: ...the way HTTP requests arrive at the server. Users are rarely
connected directly to a given Web server but rather are connected via a local
Internet point of presence (POP) that routes their requests to the destination
server through POP's server connection to the Internet. A standard Ethernet
connection is usually more than sufficient for the traffic from these slower
links to the Internet, but for intranets they are usually not fast enough. Web
servers can deliver many more static pages than Ethernet can handle. HTTP
servers provide more dynamic content, which may reduce the amount of data
servers have to send to users. HTTP servers should have a switchable 10/100-Mbps
Ethernet connection.
Abstract:

...the 10M-bps bandwidth of a single standard Ethernet connection is more
than enough to handle the traffic from the relatively slower links to the
Internet.
        Ramp it up
        In the intranet case, however, an Ethernet connection may well not be
nearly fast enough. Our tests (as well as those of others) have shown that
for static content, even multiple Ethernets are not fast enough
under heavy user loads. To keep a reasonably capable intranet server busy,
you need a 100M-bps connection.
        The reason is simple: Just as today's powerful file servers can
deliver more data than four Ethernets can carry, Web servers can
easily deliver more static pages than an Ethernet can handle.
        As we discussed a few weeks ago, however, the growing movement toward
having HTTP servers provide more dynamic content may well ultimately
lower the amount of data a server must deliver to users.
        As server content becomes more dynamic, the server's
network mileage will unavoidably vary. During this transition, you
must monitor loads carefully.
        The safest bet for any HTTP server is to make sure it contains...

...slower connection will probably be more than adequate for external
customers, and it might even be enough for an initial intranet setup.
Should your intranet traffic grow, the faster connection will
be available with minimal disruption.
        With this approach, you can spend little money and yet be prepared to
handle both Internet and intranet users.

Cable & Wireless further extends OC-192 using MPLS across global IP network; US
coast-to-coast deployment of OC-192 running MPLS completed.

...07082002
        VIENNA, Virginia -- Cable & Wireless (LSE:CW, NYSE:CWP), the
global telecommunications company, today announced it has upgraded the US
portion of its global IP network to OC-192 running MPLS from
coast-to-coast.
        The network upgrade, which delivers OC-192
network speeds from the west coast of the United States across the
Atlantic Ocean and into Europe, further reinforces Cable & Wireless'
leadership position for providing superior network performance,
quality and reach, consistently around the globe. Through the combination
of its global high performance network and IP services with Exodus'
hosting and content delivery services, Cable & Wireless
is now the premier choice for eBusiness infrastructure solutions in the
US, Europe and Asia-Pacific.
        The upgrade follows the OC-192...

...of service and performance on a global scale."
        Multi-protocol label switching (MPLS) technology allows Cable &
Wireless to provide enterprises and service providers with an
internet infrastructure to support all their applications,
connectivity and content needs - even those time critical and
mission critical services that they would typically not consider
transmitting over other best effort internet backbones.
Cable & Wireless' global IP network provides:
        * Large-scale internet content providers with the high
quality network connections required to link hosted and cached
content efficiently and securely with their target market users even
when the geographical span is several continents.
        * Global ISPs with a quality IP backbone to deliver
traffic-engineered services to their own customers. The additional capacity
and predictability offered by the upgrade is crucial for maintaining this
ability.
        * Large multinational enterprise...

...predictability consistently around the globe to keep them ahead of the
curve in terms of offering services to their customers and linking their
own operations.
        Network architecture Cable & Wireless' global IP network
is based on a core traffic engineering platform using intelligent MPLS
routing and switching capability at 10 Gbps.
        This leading platform provides a scalable, reliable and more
economic transport system for individual services, such as IP transit,
hosting, and content delivery services.
        With this network architecture, Cable & Wireless is able
to:
        * Offer high capacity OC-48/STM-16 IP access services to carriers,
content providers, ISPs and large enterprises.
        * Scale the network to handle the anticipated increase in
internet traffic in and between the US and Europe.
        * Optimally restore network traffic and minimise
service disruptions in the event of major network
disruptions.
        About Cable & Wireless
        Cable & Wireless is a major global telecommunications business

with revenue of over GBP5.9 billion (US$8.6 billion) in the
year to 31 March 2002 and customers in 70 countries. The company consists
of two core and complementary divisions: Cable & Wireless Regional and
...

...Mediation Platform Provides Greater Flexibility for Improved ROI; FusionWorks
Version 3.0 Gives Communication Service Providers More Control Over the

Transformation of Network Data Into Billable Data.

...to look at the mediation layer of their solution stack to ensure that
revenue leakage is kept to a minimum and that customers are accurately
billed based on actual usage, content and application used,"
said Barry Murphy, CEO of Openet Telecom
        Built from the ground up, FusionWorks is an open standards-based,
distributed software platform that is hardware and software
independent. A fully-scalable convergent mediation platform, it unifies
customer usage patterns from legacy network infrastructures, IP
networks and all generations of mobile networks, including WAP, GPRS, CDMA,
TDMA, EDGE and UMTS. FusionWorks enables service providers to manage the
growing complexity of their business infrastructure -- including the
collection of subscriber usage information, the integration of new and
legacy billing systems, event-based transaction pricing and
management, customer care, data warehousing, fraud management and other
related applications. The added capabilities of FusionWorks Version 3.0
allow service providers to:

   -- Manage multiple versions of the business rules that define how data i
s
      collected, transformed and distributed to business applications such
             as billing
 in order to optimize their effectiveness and efficiency
           -- Decrease operational expense and find revenue opportunities
           -- Plug revenue and fraud leaks
           -- Add equipment to the network or feed new applications without
              disrupting the ongoing mediation process
           -- Support advanced IP and 2.5 and 3G mobile communication
 technologies
             as well as all the common technologies

   -- Obtain additional reports to more effectively monitor and control the
           mediation process
           -- Control all the security capabilities...

...with minimal effort
        "As networks and services become more complex, the need for a
flexible, convergent mediation systems takes on new importance," said Denis
Cronin, billing development manager, Esat Business, the leading
provider of broadband data and corporate Internet solutions in Ireland.
"FusionWorks gives us the power to control the software...

...the Dublin-based company established a presence in the United States
with the signing of AT&T Wireless, and garnered Best New Company honors
at Billing World 2001 and Best Young Company 2001 honors by the
Irish Software Association. The company also recently closed on a $20
million investment from Benchmark...

...process," said Murphy. "FusionWorks enables service providers to gain a
better understanding of customer usage, shorten the time it takes to launch
a new service, bill for services more accurately, retrieve the
information necessary to improve service penetration and generate more
revenue from existing services."
        About Openet Telecom
        Established in 1999, Openet Telecom is the world leader in providing
scalable mediation solutions that enable communication providers to easily
implement, manage and bill sophisticated services. Openet Telecom's
flagship product, FusionWorks, is a high-performance mediation platform
that unifies customer usage patterns from legacy network infrastructure, IP
Networks...

     The RIAA has already "obtained a $1...to provide them with accurate
information.
     ACRL leaders agree that peer-to-peer networking file sharing is a
campus problem that, along with facilitating the distribution of
unauthorized copies of copyrighted work, uses valuable bandwidth and
affects overall campus network operations. We disagree, however,
with the implication that all file-sharing activities are infringements of
copyright that constitute piracy. ... Moreover, universities and libraries
are using peer-to-peer networks for research, teaching, and document

transfer that are all within the bounds of ...According to a report
in the November 26, 2002, Washington Internet Daily on the Naval Academy,
"Midshipmen are given PGs when joining the Academy and pay them off
over a 4-year stint through deductions from their monthly paychecks."
Articles discuss the actions that network managers at Stanford, Yale, Penn
State...seen as a proactive unit of the organization, and, in such a
leadership position, should still protect user rights. It should assure
that the Library Bill of Rights and other professional, free speech,
and Internet priorities are taken into account in the development of a
policy."

    Alternative Approaches for Entertainment Organizations...readers: How
many of you still get your email via peer-to-peer IJIJCP dialups or the
old "free" Internet, and how many of you pay $19.95 a month or more
to an ISP? How many of you watch "free" television over the airwaves, and
how many of you pay $20-$60 a month for cable or satellite
television? (Not to mention continue to rent movies on videotape and DVD,
and purchasing physical copies of...will be hundreds of millions of paying
subscribers. That is, unless they wait too long, in which case, Kazaa
itself will start to offer (and charge for) these advantages. (Or
would, in the absence of legal challenges.) Much as AOL, MSN, Yahoo!, Cnet,
and many others have collectively built a multi-billion dollar media
business on the "free" Web, "publishers" will evolve on file sharing
networks.

    Why would you pay for a song that you could get for free? For
the same reason that you will buy a book that ...been supplemented by
various aggregated premium channels. HBO, one of those channels, is now
television's most profitable network. Meanwhile, over on the Internet,
people pay their ISP $19.95/month for the equivalent of "basic
cable," and an ideal opportunity for a premium channel, a music download
service, has gone begging for lack of vision on the part of existing music
publishers.

    Another lesson from television is that people prefer subscriptions to
pay-per-view, except for very special events. What's more, they
prefer subscriptions to larger collections of content, rather than single
channels. So, people subscribe...

The challenge of HTTP server configuration. (Looking Forward)(PC Week Netweek)
(Technology Tutorial)(Tutorial)(Column)

Van Name, Mark L.; Catchings, Bill
PC Week , v13 , n34 , pN8(1)
August 26 , 1996
Document Type: Tutorial Column
ISSN: 0740-1604
Language: English   Record Type: Fulltext; Abstract
Word Count: 575   Line Count: 00046

Abstract: ...the way HTTP requests arrive at the server. Users are rarely
connected directly to a given Web server but rather are connected via a local
Internet point of presence (POP) that routes their requests to the destination
server through POP's server connection to the Internet. A standard Ethernet
connection is usually more than sufficient for the traffic from these slower
links to the Internet, but for intranets they are usually not fast enough. Web
servers can deliver many more static pages than Ethernet can handle. HTTP
servers provide more dynamic content, which may reduce the amount of data

servers have to send to users. HTTP servers should have a switchable 10/100-Mbps
Ethernet connection.

Abstract:
...the 10M-bps bandwidth of a single standard Ethernet connection is more
than enough to handle the traffic from the relatively slower links to the
Internet.
     Ramp it up
     In the intranet case, however, an Ethernet connection may well not be
nearly fast enough. Our tests (as well as those of others) have shown that
for static content, even multiple Ethernets are not fast enough
under heavy user loads. To keep a reasonably capable intranet server busy,
you need a 100M-bps connection.
     The reason is simple: Just as today's powerful file servers can
deliver more data than four Ethernets can carry, Web servers can
easily deliver more static pages than an Ethernet can handle.
     As we discussed a few weeks ago, however, the growing movement toward
having HTTP servers provide more dynamic content may well ultimately
lower the amount of data a server must deliver to users.
     As server content becomes more dynamic, the server's
network mileage will unavoidably vary. During this transition, you
must monitor loads carefully.
     The safest bet for any HTTP server is to make sure it contains...

...slower connection will probably be more than adequate for external
customers, and it might even be enough for an initial intranet setup.
Should your intranet traffic grow, the faster connection will
be available with minimal disruption.
     With this approach, you can spend little money and yet be prepared to
handle both Internet and intranet users.

Big brother invades the campus and workplace: Infotainment and the copyright
cops

Ebbinghouse, Carol
Searcher (SEAR) , v11 n5 , p 18-23
May 2003
ISSN: 1070-4795   Journal Code: SEAR
Document Type: Feature
Language: English   Record Type: Fulltext; Abstract
Word Count: 4352
Text:
...stands vigilant in its battle against services and technologies that
would liberate music, movies, games, media, etc., to all takers. On the
legislative front, a bill in Congress (HR 5211) would give content
producers the ability to interfere with peer-to-- peer (P2P) networks if
used for downloading their works. Specifically the bill would
"enable content owners' selfhelp measures to combat peer-to-peer piracy."2
In the article discussing the bill, "the Association for Computing
Machinery (ACM) wrote that this measure would encourage unethical
behavior.... 'We are concerned that HR 5211 would legitimize a variety of
...

...1) Permitting self-help on P2P networks could mean 'all computers
connected to the Internet.' (2) Self-help efforts 'would create new volumes
of network traffic, resulting in Internet service disruptions
and degradation of service for innocent Internet users, many of whom may
not be using P2P networks.' (3) The bill 'underestimates the
technical challenge' of identifying copyrighted works online. (4) Self-help
would involve defeating firewalls and other security measures, that ACM
said violated both the Digital Millennium Copyright Act (DMCA) and the USA
Patriot Act. (5) The bill ignores the fact that P2P is used for a
variety of uses, including R&D via distributed computing."
       While I agree with PC Magazine, that...

...3).
       The letters to corporate America4 asked the companies to prevent their
employees from taking copyrighted material off the Web while at work. The
creative content organizations pointed out that it "appears that
many corporate network users are taking advantage of fast
Internet connections at work by publicly uploading and downloading
infringing files on P2P services and also distributing and storing
such files on corporate intranets. ... The use of your digital
network to pirate music, movies and other copyrighted works both
interferes with the business purposes your network was built to
serve and subjects your employees and your company to significant legal
liability under the federal copyright law." Now that's subtle. The creative
content organizations' letter encourages companies to implement
"employee policies and technical measures to prevent copyright
infringements on ... corporate networks."
       The RIAA has already "obtained a $1...

...you to provide them with accurate information.
       ACRL leaders agree that peer-to-peer networking file sharing is a
campus problem that, along with facilitating the distribution of

 ...ownership."

Array Networks' all-in-one Array product family combines accelerated Layer
4-7
server load balancing with high-performance caching, built-in SSL
acceleration, content rewrite for transparent interaction with
content
delivery networks, Web security, global server load balancing, and
seamless
clustering. The Array platform is service-on-demand configurations and open
API
offer the flexibility to add a rich set of services and features, including
essential Web traffic management capabilities as well as dynamic
caching,
content replication, advanced security, billing and
monitoring systems, etc.
"Array Networks' integrated platform is an ideal solution for the channel
because its all-in-one capabilities reduce the complexity and risk of Web
traffic management," said Donald Massaro, President and Chief
Executive
Officer of Array Networks. "The Array appliance delivers our 'Power
tools for
the Web,' an integrated suite of Web traffic management capabilities
that's
like selling Microsoft Office for the network. Pay
-as-you-grow configurations

enable solution providers to address their customers' immediate needs and
expand their business without disruption."

Array Networks' Power Partners channel program offers benefits including:

    -- Pre-sales and technical support through Array sales offices in
       Germany, Great Britain, France, Japan, Korea...

 Cable & Wireless (NYSE: CWP;
LSE:CW), the global telecommunications group, today announced it has upgraded
the US portion of its global IP network to CC-192 running MPLS from
coast-to-coast. The network upgrade, which delivers CC-192 network speeds
from the west coast of the United States across the Atlantic Ocean and into
Europe, further reinforces Cable & Wireless' leadership position for providing
superior network performance, quality and reach, consistently around the
globe. Through the combination of its global high performance network and IP
services with Exodus' hosting and content delivery services, Cable & Wireless
is now the premier choice for eBusiness infrastructure solutions in the US,
Europe and Asia-Pacific.
    The upgrade follows the CC-192...

...of service and performance on a global scale."
    Multi-protocol label switching (MPLS) technology allows Cable &
Wireless
to provide enterprises and service providers with an Internet infrastructure
to support all their applications, connectivity and content needs -
even those
time critical and mission critical services that they would typically not
consider transmitting over other best effort Internet backbones. Cable &
Wireless' global IP network provides:

    * Large-scale Internet content providers with the high
quality network
        connections required to efficiently and securely link hosted and
cached
        content with their target market users even when the
geographical span
        is several continents.

    * Global ISPs with a quality IP backbone to deliver
traffic-engineered
        services to their own customers. The additional capacity and
        predictability offered by the upgrade is crucial for maintaining
this
        ability.
    * Large multinational enterprise...
     Network Architecture
    Cable & Wireless' global IP network is based on a core traffic
engineering
platform using intelligent MPLS routing and switching capability at 10
Gbps.
This leading platform provides a scalable, reliable and more economic
transport system for individual services, such as IP transit, hosting, and
content delivery services.
    With this network architecture, Cable & Wireless is able to:

    * Offer high capacity OC-48/STM-16 IP access services to carriers,
        content providers, ISPs and large enterprises.
    * Scale the network to handle the anticipated increase in
Internet
        traffic in and between the US and Europe.
    * Optimally restore network traffic and minimise service
disruptions in
        the event of major network disruptions.

    About Cable & Wireless
    Cable & Wireless is a major global telecommunications business with
revenue of over 5.9 billion pounds sterling (US$8.6 billion)
in the year to
31 March 2002 and customers in 70 countries. The company consists of two
core
and complementary divisions: Cable & Wireless Regional and...

 ...to look at the mediation layer of their solution
stack to
ensure that revenue leakage is kept to a minimum, and that customers are
accurately billed based on actual usage, content and
application used," said
Barry Murphy, CEO of Openet Telecom.
    Built from the ground up, FusionWorks is an open standards-based,
distributed software platform that is hardware and software
independent. A
fully-scalable convergent mediation platform, it unifies customer usage
patterns from legacy network infrastructures, IP networks and all
generations
of mobile networks, including WAP, GPRS, CDMA, TDMA, EDGE and UMTS.
FusionWorks enables service providers to manage the growing complexity of

their business infrastructure -- including the collection of subscriber usage
information, the integration of new and legacy billing systems, event-based
transaction pricing and management, customer care, data warehousing, fraud
management and other related applications. The added capabilities of
FusionWorks Version 3.0 allow service providers to:

      -- Manage multiple versions of the business rules that define how data is
         collected, transformed and distributed to business applications such
         as billing in order to optimize their effectiveness and efficiency
      -- Decrease operational expense and find revenue opportunities
      -- Plug revenue and fraud leaks
      -- Add equipment to the network or feed new applications without
         disrupting the ongoing mediation process
      -- Support advanced IP and 2.5 and 3G mobile communication technologies
         as well as all the common technologies
      -- Obtain additional reports to more effectively monitor and control the
         mediation process
      -- Control all the security capabilities...
      "As networks and services become more complex, the need for a flexible,
convergent mediation systems takes on new importance," said Denis Cronin,
billing development manager, Esat Business, the leading provider of broadband
data and corporate Internet solutions in Ireland. "FusionWorks gives us the
power to control the software...

      ...the
Dublin-based company established a presence in the United States with the
signing of AT&T Wireless, and garnered Best New Company honors at Billing
World 2001 and Best Young Company 2001 honors by the Irish Software
Association. The company also recently closed on a $20 million investment
from Benchmark...

      ...process," said Murphy. "FusionWorks enables service
providers to gain a better understanding of customer usage, shorten the time
it takes to launch a new service, bill for services more accurately, retrieve
the information necessary to improve service penetration and generate more
revenue from existing services."
      About Openet Telecom
      Established in 1999, Openet Telecom is the world leader in providing
scalable mediation solutions that enable communication providers to easily
implement, manage and bill sophisticated services. Openet Telecom's flagship
product, FusionWorks, is a high-performance mediation platform that unifies
customer usage patterns from legacy network infrastructure, IP Networks...

transmitting over other best effort internet backbones.
Cable & Wireless' global IP network provides:
     * Large-scale internet content providers with the high
quality network connections required to link hosted and cached
content efficiently and securely with their target market users even
when the geographical span is several continents.
     * Global ISPs with a quality IP backbone to deliver
traffic-engineered services to their own customers. The additional capacity
and predictability offered by the upgrade is crucial for maintaining this
ability.
     * Large multinational enterprise their own operations.
     Network architecture Cable & Wireless' global IP network
is based on a core traffic engineering platform using intelligent MPLS
routing and switching capability at 10 Gbps.
     This leading platform provides a scalable, reliable and more
economic transport system for individual services, such as IP transit,

hosting, and content delivery services.
     With this network architecture, Cable & Wireless is able
to:
          * Offer high capacity OC-48/STM-16 IP access services to carriers,
content providers, ISPs and large enterprises.
          * Scale the network to handle the anticipated increase in
internet traffic in and between the US and Europe.
          * Optimally restore network traffic and minimise
service disruptions in the event of major network
disruptions.
     About Cable & Wireless
     Cable & Wireless is a major global telecommunications business
with revenue of over GBP5.9 billion (US$8.6 billion) in the
year to 31 March 2002 and customers in 70 countries. The company consists
of two core and complementary divisions: Cable & Wireless Regional and

Text:
...long as it is not onerous.
     The purpose of our tax system is twofold. The first purpose is to
raise money for the government to pay for services delivered by the
government. This comes in two forms: user fees and income taxes. User
fees are typically paid by people who consume certain items that result
in government spending to support their consumption. For example, gas
taxes often go to pay for bridge and highway   construction and
repairs. Income taxes are typically paid based on income made, and the
purpose is a general financing mechanism for...
...would seem that Internet taxes should be based on need-to- provide
services, not to replace sources of revenue. Identify the sources, and we
will pay the taxes.
     Mike Kirby
     Xerox Corp.
     On the Internet
     I'm against the concept of a "bit tax" for several reasons. Let me
list a few:
     - Double taxation: We communicate over the telephone lines, for
which we already pay state and federal taxes. This would then tax
the content and purpose of the communication.
     - Economic disruption: I am sure that Internet usage
will affect   usage of long-distance and conventional mail, but more
likely, it will   affect overnight delivery usage. This would hurt
FedEx more than the good old U.S. Postal Service. As far as long-distance
usage, I've seen Bell getting...that transmission of bits is just
another form of inter-person communication. I agree totally that when the
services or goods are exchanged with a payment, a tax should be

applied. However, any communication/info-exchange leading to that sale
should not be taxed. If a network service provider charges by the
bit (because that is how the provider wants to provide the service), then
the bits should be taxed. If a network service provider...

...day, nonstop, over the phone with someone I would like to do business
with, and a communication tax is based on how my phone company
charges the connection. If the connection is time-metered, the
tax is time- metered. If the connection is a local flat monthly fee, the
tax is...

...s request
      On the Internet
      The Internet is a very expensive toy. Even if it has the potential
to turn into a global marketplace where billions or trillions of
dollars can be made, the expansion, evolution, equipment and management
of the Internet will be a very expensive venture. We have to...then the
concept of a national bit tax does not stand very well. That would mean
that only the U.S. users or companies would pay for the rest of
the world using the service?
      Unless we have a global organization, such as W3 or the InterNIC, in
charge of collecting the bit tax on a worldwide basis, we cannot
expect to charge a fraction of the users and let the rest freely
use the service without having strong reactions from the taxed users. But
let's say...

...that the Internet has become a private business, that the government
did bail out of Arpanet and CO? For budgetary reasons.
      I would agree to pay a bit tax, if only that money is used to
manage, maintain and improve the Internet, not to pay more
politicians or for deficient public services as we have today.

NTN COMMUNICATIONS : NTN Network Offers Limited Games Schedule Until Customer
Satellite Dish Realignment Is Complete

May 22, 1998

Byline: Business & Entertainment Editors/Technology Writers
...a limited game schedule. The NTN system was
designed to revert to a back-up system in each individual location's
PC hard drive upon disruption
 of satellite transmission. NTN also has
the ability to communicate with sites via a telephone modem
connection
within the NTN system
      Sokol added, "We estimate that the labor charges
 associated with
realigning the dishes will cost the company about $300,000 to $400,000

in the current quarter. We are fortunate in that the...

...compete. The new start date will be June
12.
    NTN Communications Inc. (AMEX:NTN) is a leading producer and
programmer of interactive television, online and Internet
entertainment. Based in Carlsbad, Calif., the company broadcasts to a
variety of delivery platforms 24 hours a day, providing multi-player
sports and trivia games through hospitality locations such as bars,
restaurants and hotels. NTN's content is also available through
America Online (keyword: ntn). The company's website is located at
www.ntn.com
